Printers
Mobile POS: works with receipt printers connected to your store network
Inventory and Line Buster: works with most Zebra-compatible bluetooth printers, such as Zebra MZ-220

Line Buster

Our goal is to help make your business as efficient and profitable as possible. And as your customers do not like waiting in long lines we would like to improve your checkout efficiency.

POS line buster lets you pre-scan a shopper's basket prior to check-out. Then give the shopper a numbered ticket to reference the sale, providing your customer with a quick, easy way to complete their payment transaction at checkout.

Inventory

Physical Inventory

Physical Inventory supports both open and blind counting methods. Multiple physical inventory sessions can be saved in the mobile device. Sessions may be synchronized to Retail Pro.

Receiving & Transfers

With a few simple scans, received items can be entered into the mobile device receiving station and then imported into Retail Pro.

Different receiving items can be saved in the mobile device and then synchronized to the main station at a later time.

Inventory Check & Label Printing

Check inventory status and validate labels. With one scan of an SKU, UPC, or ALU, and item's status is retrieved and displayed on the screen. You can print labels as needed.
